More than 18 percent of adults in the U.S. lives with a mental illness in any given year, with four percent experiencing a severe mental illness. Mental illnesses are the leading cause of disability in the U.S. for 15-44 year olds. According to the U.S. Surgeon General, a range of effective treatments exist for most mental illnesses, yet nearly half of all Americans who have a severe mental illness fail to seek treatment. Good mental health is essential to leading a healthy life.

**Mental illness in Dakota County**
- The rate of hospitalizations of Dakota County residents for mental illnesses remained stable from 2012 to 2016.
- 10.5 percent of Dakota County 8th graders, 11 percent of 9th graders, and 15 percent of 11th graders were treated for a mental illness in the previous year (2016). More females than males reported treatment for a mental illness.

**Depression**
- In 2014, an estimated 20 percent of Dakota County adults 25 and older reported having ever been told they have depression. Among those who reported having depression, 57 percent reported they are currently taking medication prescribed for depression.
- In 2016, 35 percent of Dakota County 8th graders, 39.5 percent of 9th graders and 46 percent of 11th graders said they were bothered by feeling down, depressed and hopeless in the last two weeks. The percents were below the state for 8th graders and similar to the state for 9th and 11th graders.

**Anxiety and stress**
- Nineteen percent of Dakota County adults 25 and older reported having ever been told they have anxiety.
- In 2016, 33 percent of Dakota County 5th graders agreed that they worry a lot, slightly below the state.
Suicide

- There were 59 suicides in Dakota County residents in 2017.

![](Suicide_Rate_Dakota_County_2007-2016.png)

- The suicide rate is higher for males than females. The rate generally increased from 2007 to 2016. The Dakota County rate was slightly below the state for the period 2015-2017.
- In 2016, 11 percent of Dakota County 8th and 9th graders, and 12 percent of 11th graders said they seriously considered attempting suicide during the past year. These percents are similar to the state for 11th graders and slightly below the state for 8th and 9th graders.
- In 2016, three percent of Dakota County 8th and 11th graders and four percent of 9th graders reported they had actually attempted suicide during the past year. These percents are similar to the state for 9th and 11th graders and slightly below the state for 8th graders.

Self-injury

- The rate of non-fatal, self-inflicted injuries requiring emergency room or inpatient care increased in Dakota County from 2014 to 2016. The rate is highest for 15-19 year olds, and females have a higher rate than males (2016).
- In 2016, 15 percent of Dakota County 8th and 9th graders and 14 percent of 11th graders reported hurting themselves on purpose during the last year. These percents are slightly below the state for all grades.

Family connections

- Dakota County students who reported that they can talk to their father or mother some or most of the time increased in 9th graders from 1992 to 2016.

Attention deficit hyperactivity disorder (ADHD)

- ADHD is one of the most common neuro-behavioral disorders in children. It can persist into adolescence and adulthood. About half of those with ADHD also have other behavioral disorders.
- Nine percent of U.S. children ages 2-17 were ever diagnosed with ADHD (2016).

Eating disorders

- During their lifetime, an estimated 0.6 percent of females suffer from anorexia, one percent from bulimia, and three percent from binge eating disorders.

Autism spectrum disorders (ASD)

- An estimated two percent of Minnesota children are affected by an ASD, slightly higher than the U.S. overall.
- More children than ever before are being classified with ASDs. This increase may be due to improved diagnosis.
- Children with autism enrolled in special education in Dakota County schools increased by 31 percent from school years 2009-10 to 2018-19.
