

Your child may have been exposed to:

Herpes Gladiatorum

Herpes gladiatorum is a viral skin infection that occurs frequently among wrestlers and is sometimes called “matt herpes”. It is not a sexually transmitted disease.

If you think your child has herpes gladiatorum, tell coaches and school health staff.

Keep your child out of all contact sports until all sores are dry and scabbed. Follow your health care provider’s recommendations and the specific sports league rules about when to return to practice and competition.

For more information, call Dakota County Public Health Department at 952-891-7500.

Symptoms

A single blister or a cluster of blisters (fluid-filled bumps) may be the only symptom. The bumps are usually on exposed areas of the head, neck, and shoulders. Sometimes fever, sore throat, swollen lymph nodes or burning or tingling of the skin may be present before the blisters appear. Blisters will eventually scab and crust. *Herpes gladiatorum* infections can recur throughout life.

If your child is infected, it may take 2 to 14 days for symptoms to start.

Spread

- By skin-to-skin contact or touching saliva.
- Usually spread during sports with close physical contact or during sports that tend to cause skin abrasions.

Contagious period

Until all sores are dry and scabbed.

Call your health care provider

- If anyone in your home has symptoms or if there are sores around the eye. Your doctor will decide what treatment is needed.

Prevention

- Parents/guardians should inform gym teachers, school health, and coaching staff if your child has blisters and/or sores. Also inform staff if your child has had herpes gladiatorum in the past and develops burning or tingling at the site where the infection was before.
- Do not pick or squeeze skin sores; drainage is very infectious.
- Avoid touching eyes, nose, or mouth with your hands.
- Clean your hands with warm water and liquid soap before and after practice and competitions.
- **Shower at school after practice or competition.** Use your own plastic bottle of liquid soap. Wash your towel after each use, using hot water with detergent (and bleach if possible) and dry on high heat setting.
- **Change clothes and clean equipment daily.** Clean equipment with the same soap you use for showering.
