

CLIFF ROAD STUDY

NEWSLETTER #1

Project Overview

Cliff Road (Highway 32) provides an important transportation connection through the cities of Burnsville, Eagan, and Inver Grove Heights. It serves a significant role in the overall roadway system by providing movement to people, freight, and services between key regional corridors. **The Cliff Road Study will examine the corridor segment from Lexington Avenue to Trunk Highway 3.**

Neighborhood concerns along the corridor prompted discussions with the City and County to identify roadway improvements. This corridor study will include review of current and forecasted traffic operations, identification of potential future roadway and/or intersection improvements, trail locations along the corridor, pedestrian crossings, and the location for a grade separated crossing of Cliff Road for the Mendota Lebanon Hills Greenway.

The goals of this study are to:

- Safely accommodate all users along the corridor
- Identify a comprehensive network for multimodal transportation that is compatible with local and regional needs
- Support efficient and reliable vehicle mobility
- Identify infrastructure improvements compatible with the natural and human environment
- Develop a financially responsible infrastructure implementation plan

Public meetings will be held throughout the study process. Meeting dates and details will be posted to the study website when finalized and advertised through various digital and hardcopy outlets. An Open House will be held on January 17th - more details to come.

Share Your Input Online!

Help the project team to understand the issues and opportunities along the corridor.

Visit the **study website** and look for the INPUTiD link to share your ideas.
